Estimado equipo de Leadtech Group:

Dear Leadtech Group team,

I am applying for the Senior Full Stack AI Native Developer role. I am an AI engineer and team leader with more than four years building backend systems in production, focused on LLM-powered applications and agent architectures. I work remotely from Pereira, Colombia, and can overlap with CET.

Most of my recent work is agents running in production, not prototypes. I built Atiende, a conversational agent on WhatsApp, Instagram DM and Facebook Messenger, with a hexagonal ports-and-adapters architecture and a tool use loop validated with Zod. It enforces a USD budget per conversation, iteration and token limits, and a circuit breaker with a multi-provider LLM router and automatic fallback. I also built CV Harness, an event-driven pipeline with idempotent queues, retries and exponential backoff, where vacancies are matched against a CV indexed in pgvector. That work on tool access, state and multi-step reasoning is what I would bring to your MCP and Claude SDK agents; I already use the Claude API, MCP servers and subagents daily in a spec-driven flow.

On the API side, I have designed and maintained REST services with Node.js, TypeScript and Express/NestJS, including JWT and OAuth 2.0 authentication, schema validation with Zod, and webhooks that verify signatures and stay idempotent for asynchronous tasks, plus reconciliation cron jobs against banking APIs. I led a team of four developers through code reviews and production delivery, and I build interfaces with React and Next.js.

I have not yet worked with LangGraph, LangFuse, BigQuery or GCP in production. My cloud experience is Docker, Kubernetes, AWS EC2 and Nginx, and my Python sits at scripting and Flask level rather than extensive framework work. I learn new tools quickly and fold them into my daily workflow.

I am available to start remotely and to align my schedule with the team's time zone. I would be glad to talk about how I can contribute to the products at MAU by Leadtech.

Best regards,
Christian Henao
