

PROFESSIONAL SUMMARY

AI Engineer and Team Leader with 4+ years building and maintaining production systems powered by LLMs, including two AI products shipped and live: Atiende (multi-channel conversational agent) and CV Harness (event-driven pipeline). I build and reason about multi-agent systems and agentic workflows with tool use loops, RAG pipelines and vector databases (PostgreSQL + pgvector), plus multi-provider LLM API integrations (Anthropic Claude, OpenAI, DeepSeek, Groq) with per-conversation cost controls. Strong backend experience with Postgres and API construction, paired with product sense and genuine interest in UI quality, animation and design systems in Next.js and React (Tailwind, Framer Motion, shadcn/ui). I work daily with AI coding tools such as Claude Code and with MCP servers (Model Context Protocol) and subagents in a spec-driven workflow, and I'm comfortable working independently in fast-paced remote environments. English B2 - written and verbal communication; based in Colombia (GMT-5), available to overlap with PT hours (9am-3pm, GMT-7).

PROFESSIONAL EXPERIENCE

2024 - August 2026 | Finova SAS

Team Leader & Full Stack Developer

Led a team of 4 developers: task distribution and prioritization, technical definition, code reviews and delivery assurance in production, keeping clear written and verbal communication with the team and stakeholders.

Built and maintained backend and frontend systems for the financial sector with Node.js, TypeScript, NestJS, PostgreSQL and Prisma, focused on security, bank integrations, backend API construction and scalable architectures.

Designed bank API and payment gateway integrations: real-time status webhooks, reconciliation cron jobs and asynchronous job handling with idempotency/transactionality.

Introduced and consolidated AI coding tools (Claude Code, LLM assistants) into the team workflow, accelerating iterations without losing quality or human review.

Coordinated the full work cycle: planning, execution and unblocking the team in complex technical scenarios, providing autonomy and clear priorities.

2022 - 2024 | Independiente

Software Engineer Freelance

End-to-end development of platforms for multiple clients: payment gateways, messaging APIs over Meta WhatsApp Business API, e-commerce and microservices.

Designed and deployed solutions with Node.js, TypeScript, PostgreSQL/MySQL and Prisma, integrating third-party APIs and automations, working independently in remote, fast-paced delivery cycles with documented handoff per client.

Implemented secure authentication (JWT, OAuth 2.0 with Google and Facebook), transactional integrity and idempotency in financial flows.

PROJECTS

ATIENDE - MULTI-CHANNEL AI CONVERSATIONAL AGENT (WHATSAPP · INSTAGRAM DM · MESSENGER)

- Architect and development lead of a conversational AI agent for Latin American SMBs, live on 3 channels (WhatsApp, Instagram DM, Facebook Messenger) with a shared inbound pipeline (persist-before-enqueue, dedup, agent, delivery).
- Designed a strict hexagonal architecture (ports & adapters): pure `core/` logic without importing SDKs and `modules/` with interchangeable adapters, with per-module feature flags to turn LLM providers, channels, tools and cache layers on/off without touching code.
- Implemented multi-level caching combining Anthropic prompt caching, semantic cache in a vector database (pgvector) and exact cache in Redis, projecting ~30% LLM cost savings per conversation (the metric is exposed to the business).
- Built the tool use / function calling loop with Zod validation, USD budget per conversation, iteration/token limits and a multi-provider LLM router + circuit breaker with automatic fallback, the core of the agent's agentic workflows.
-

Stack: TypeScript, NestJS 11, PostgreSQL 16 + pgvector (RAG), Prisma 6, Redis 7, BullMQ, LLM APIs (Anthropic Claude, Groq, OpenAI Embeddings), Meta WhatsApp Business API, Zod, Docker.

CV HARNESS - AI-POWERED EVENT-DRIVEN JOB SEARCH HARNESS

- Architect and developer of an end-to-end event-driven harness built on async job frameworks: cron -> dispatch -> Rust scraper (Redis Streams consumer group) -> ingestion with dedup by `sha256(url)` -> AI normalization -> match -> resume generation -> notification, all through idempotent queues with retries and exponential backoff.
- Designed a hybrid fit match: AI analysis + semantic similarity against the resume indexed in a vector database (pgvector), combined as $\text{final} = 0.65 \cdot \text{AI} + 0.35 \cdot \text{semantic}$, with reasons, gaps, angle and suggested channel.
- Built a deterministic ATS scorer (0-100) - keywords, structure, contact and format - explainable and reproducible without AI, plus an ATS mode that exports a single-column template with standard headings to pass automated filters.
- Implemented in-browser PDF generation with `@react-pdf/renderer`: a single engine for preview and download, with selectable text (ATS-compatible), a template matched to the original CV and automatic verification of embedded fonts and heading extraction in linear order.
- Stack: NestJS 11, Rust (tokio, reqwest, scraper), PostgreSQL 16 + pgvector, Prisma 6, Redis Streams + BullMQ, DeepSeek, Groq, OpenAI Embeddings, Next.js, Docker, Vitest.

PAYMENT GATEWAY PLATFORM - FULL-STACK FINANCIAL INTEGRATION

- Led end-to-end development of a payment gateway for the Colombian financial sector: backend API + checkout and dashboard frontend.
- Designed the complete payment flow from checkout to reconciliation with the bank API (Goupagos AvVillas).
- Implemented real-time status webhooks with signature verification and a dedicated callback URL, plus cron jobs to reconcile pending transactions against external APIs.
- Guaranteed transactional integrity, idempotency and secure login sessions; applied Singleton (DB instance management) and Adapter (decoupling the bank provider).
- Stack: Node.js, TypeScript, NestJS, React, PostgreSQL, MySQL, Prisma, Webhooks, Cron Jobs, JWT, Docker.

MULTI-CHANNEL MESSAGING AND AUTOMATION PLATFORM - 12+ MICROSERVICES

- Architect and lead of 12+ independent microservices (WhatsApp, Slack, Notion, Instagram, TikTok, Messenger, Email), each with its own repository, database and Dockerfile.
- Orchestrated with RabbitMQ topic exchanges and a single public HTTP gateway: strict rule that services never talk directly, always through events.
- Built a CQRS read model in MongoDB maintained by `data.` events, a scheduler with async job frameworks (BullMQ + Redis), an identity unification service and scraping with Puppeteer.
- Ecosystem managed with Git submodules and local orchestration with Docker Compose.

CUSTOM E-COMMERCE PLATFORM WITH ANALYTICS DASHBOARD

- Built a tailored online store with product pages, social sharing and an admin dashboard with real-time metrics and insights, the internal tooling layer for the business.
- Implemented user behavior tracking to analyze preferences and optimize the interface (foundation for eval pipelines and prompt A/B testing).
- Integrated OAuth 2.0 authentication (Google and Facebook) and Cloudinary with dynamic image transformations.
- Stack: Next.js, React, NestJS, TypeScript, Zustand, PostgreSQL, Prisma, Cloudinary.

ARTAG DEV - PERSONAL PORTFOLIO AND DIGITAL PRESENCE

- Full-stack portfolio with server-first App Router, an in-house design system on shadcn/ui + Tailwind and multi-channel analytics (GA4, Meta Pixel, TikTok Pixel) with auto-generated CSP.
- Content versioned in `src/data/` (no CMS), JSON-LD structured data (Organization, Person, FAQ) for search engines and AI crawlers, and an AI chat widget via n8n. Deployed on Vercel.
- Stack: Next.js 15, React 19, TypeScript, Tailwind CSS, Framer Motion, GSAP, n8n, Vercel.

SKILLS

Next.js (App Router, server-first), React, Multi-agent systems & agentic workflows, RAG (embeddings, chunking with overlap, cosine search), Vector databases (pgvector), PostgreSQL, pgvector, LLM APIs (Anthropic Claude, OpenAI, DeepSeek, Groq), Tool use / function calling, Backend API construction (REST API design, server-side APIs in Next.js), TypeScript, Node.js, NestJS, Prompt engineering (system prompts, few-shot, CoT, structured outputs), Tailwind CSS, Design systems & UI animation (Framer Motion, GSAP, shadcn/ui), LLM cost control & budget per conversation, Prisma ORM, Async job frameworks (Redis Streams consumer groups, BullMQ), Docker & Docker Compose, AI coding tools: Claude Code, MCP servers (Model Context Protocol) & subagents, Framer Motion, Prompt caching (cache_control)

EDUCATION

2023 - Presente
Diseño Multimedia y Web (Tecnólogo)
SENA

2021 - 2022
Programación con énfasis en aplicaciones web
Universidad Autónoma de Bucaramanga

LANGUAGES

Español Nativo
Inglés B2

SOFT SKILLS

- Technical leadership of a 4-developer team: tasks, mentoring, code reviews and unblocking.
- Written and verbal communication in English (B2).
- Ability to work independently in remote, fast-paced environments.
- Availability to overlap with PT hours (9am-3pm, GMT-7) from Colombia (GMT-5).
- Complex problem solving and analytical thinking.
- Adaptability and fast learning of emerging technologies.
- Teamwork and communication with developers, designers and clients.
- Proactivity in continuous improvement and optimization.
